

fencing

## . about CarmoFarm

Fencing is an essential element in the management of agricultural, forestry, industrial or environmental protection land. **We are pioneers in agricultural fencing construction**, having been the first company to build this type of fencing in Portugal. Our catalog lets you choose from a wide range of products, designed to blend into their surroundings, which can be complemented with rustic gates and wickets.

# . fencing

Fencing is an essential element in the management of agricultural, forestry, industrial or environmental protection land. Although often considered secondary infrastructure, fencing plays a functional and strategic role:

**Safety and protection of people, crops and animals,** preventing unwanted entry of people or animals and containing animals within defined areas, requiring robust posts able to withstand impact, time and attempts to knock them down.

**Durability under demanding conditions,** with installations that withstand years of use in harsh outdoor environments (exposure to water, heat, sun, salinity, strong winds, ice, permanent humidity), achieved through deep-treated wood (Class 4), suited to different climate zones.

**Ease and speed of installation,** especially over large perimeters or irregular terrain, through lightweight, uniform posts compatible with manual or mechanical driving, ensuring efficiency.

**Sustainability and landscape integration,** avoiding visual pollution and maintaining harmony with the environment through the use of natural, renewable, low-footprint materials.

**Fast maintenance** in case of breakage.

### FENCING TYPES

Rustic treated wood fences. The specialized autoclave treatment under double vacuum and pressure, using an environmentally friendly product that penetrates the wood completely, ensures durability backed by our seal of guarantee.

## WOODEN POSTS

CarmoFarm treated wood posts combine durability and sturdiness, making them an excellent choice for agricultural support.

**Conical:** Posts ranging in length from 1.5m to 3m are often used for fences (typical diameters range from 6 to 14cm).

**Machine Rounded:** Used in fences where aesthetics are a greater concern.

Treated wood products eligible for FSC® and PEFC certification

20  
years of guarantee

## NETS

**Flex Progressive Series:** The Flex progressive fence is distinguished by the Flex knot.

**FK Series:** The FK progressive fence is distinguished by the fixed knot.

**XK Series:** The XK progressive fence is distinguished by the XK knot.

**Heavy-Duty Plastic-Coated Mesh:** Electro-welded, green plastic-coated mesh with a 50 × 50 mesh size and 3 mm wire. It is equipped with defensive tips.

**Luxor Plastic-Coated Netting:** Electro-welded, green plastic-coated netting with a 100 × 50 mesh and 2.5 mm wire.

**Palma Plastic-Coated Netting:** Electro-welded, green plastic-coated netting with a 100 × 50 mesh and 2.2 mm wire.

## AGRICULTURAL GATES AND OTHER ACCESSORIES

CarmoFarm offers a range of gate models available in different sizes, like our Square Gate, made of portuguese treated pine, presenting a warranty of up to 20 years and a Metal Gate, to complement our portfolio.

**Barbed Wire** provides vital protection for your fencing, defending it against pressure from animals.

**Barbed Staples** are designed for use in wooden posts, so the barb resists being pulled out.
